

• CARBOSAN

DIARRHOEA, GASTRO-INTESTINAL FERMENTATION, SELF-INTOXICATION

INGREDIENTS: Fruit products and by-products, sugars, tuber and root products and by-products, mineral substances.

DOSAGE: mix 25 g (4 measures) of BIOSTOP to every Kg of egg-food.

USEFUL ADVICE: BIOSTOP has excellent membrane-forming characteristics for the intestinal wall, able to trap bacteria, absorb toxins and expel them from the body through the faeces, as well as regulating the intestinal bacterial flora. BIOSTOP is recommended for mixing with the egg-food, for 6 – 7 days, if the faeces are liquid and when the chicks are being weaned; use 2 days per week for prevention and as an intestinal regulator. For best results, BIOSTOP is recommended for use in combination with FERMENTOS PLUS.

Powder – Tin 250 g

• ENERGOVIS NEW

REARING

USEFUL HINTS: a new conception complex multivitamin product, specifically studied for the needs of birds during breeding, to grow the chicks, after therapy and organic debilitation.

Contains 42 components of which **vitamins, amino acids and oligoelements** and also contains **GINSENG**, well known for its energetic-tonic treatment properties and **CALCIUM**, in a bio available form, particularly useful during breeding and to grow the chicks.

INSTRUCTIONS FOR USE: 10 g each litre of water or 30 g each Kg of egg-food, for 1-2 days per week, during the whole breeding period; for 7 consecutive days after therapy, when weaning the chicks and during organic debilitation.

N.B.: a synergic effect is obtained in combination with ENERGOVIS NEW and DEFENDER FORTEX.
