STIMULATES THE IMMUNE SYSTEM

INTESTINAL BIO-REGULATOR

INTESTINAL BIO-REGULATOR

Some antibiotics can have nasty side effects, and research has been examining natural and harmless substances which can help to fight a wide range of diseases.

Among these substances we can certainly count the **FRUCTOLIGOSACCHARIDES** which inhibit flora bacteria pathogens present in the intestine and strengthen the beneficial ones.

The most recent and surprising discovery is however the **BETAGLUCANES**.

BETAGLUCANES are **para-immunity inducers**, a specific defence for a number of micro-organisms (bacteria, virus, fungus, protozoa) and also stops the intestine from being attacked by *E. COLI* and *SALMONELLA*. It provides a better resistance to the main diseases especially in stress conditions (rearing, weaning, moulting).

BETAGLUCANES and **FRUCTOLIGOSACCHARIDES** are not toxic and their combined use enhances the characteristics of each substance.

FERMENTOS PLUS: contains Betaglucanes and Fructoligosaccharides and can be included in any feed – it is recommended for use all year round.

Use **FERMENTOS PLUS** to:

- increase the amount of beneficial flora bacteria and reduce the pathogens in the intestine.
- create a barrier against micro-organisms and pathogens.
- increase the absorption of nutritional substances.
- Stimulate the immune system.
- Increase the resistance to disease and reduce mortality.

It will therefore lead to more healthy birds and will increase their reproduction capacities.

INSTRUCTIONS FOR USE: add 20 g of the product (3 full measures) to every Kg of feed, all year round.

Powder - Pot 250 g
