

•LIEVISAN

YEAST

INGREDIENTS: Dried yeast.

INSTRUCTIONS FOR USE: The product should be used for growing chicks, during rearing and moulting. 25 g (4 measures) to every Kg of feed.

USEFUL ADVICE: LIEVISAN is a 100% natural product, providing protein (40-45%), B Vitamins and Amino acids, and is particularly useful during rearing, moulting and for growing chicks. Given its high protein content, it can be used to increase the protein content of the feed.

Powder – Pot 500 g

•MICRO E

MATING – BREEDING

SUPPLEMENT PER Kg: Vitamin E (alpha-tocopherol) 16.000 mg, Selenium (Sodium selenite) Se 10 mg.

WHEN IT IS NEEDED: when the need for vitamin E increases; especially before mating and during brooding time.

USE: 6 g (1 full small measure) per litre of water or 15 g (2 full small measures) per Kg of mesh during 15-20 days for male birds and 10-15 days for female birds, before mating; during brooding, it should be administered during 7 days before egg-laying.

USEFUL SUGGESTIONS: Vitamin E have been used for a long time by birds breeders, getting good results. It stimulates spermatogenesis and promotes mating. For best results we suggest you to use MICRO E, together with RD51 or ENERGOVIS NEW

Powder – Pot 250 g
