

•TISANA

DETOXIFIER

INGREDIENTS: Water – Couch Grass Extract – Dandelion Extract – Nettle Extract – Equisetum Extract - Dextrose – Fructose – Preserving agents: EEC additives.

INSTRUCTIONS FOR USE: use for 5 days running, once a month and for 10-15 days running when birds have swollen bellies due to feeding imbalance. 10 cc for every litre of water.

CHARACTERISTICS: the beneficial action of certain plant substances on the organism is by now well known, in general and on some specific organs: dandelion purifies the blood and the liver; nettle purifies and is rich in iron; equisetum strengthens the lungs and the kidneys, and couch grass is diuretic and purifying.

N.B. For a better effect, administer together with TISANA in water and MUTASTRESS in feed. To increase its desirability, add DEFENDER FORTEX in a ratio of 5 cc for every litre of water.

Liquid - Bottle 200 ml

•XANTOFIL PLUS

CONTAINS CANTHAXANTHIN, MICRO-ENCAPSULATED VEGETABLE COLOURINGS, MILK THISTLE (SILYBUM MARIANUM)

INSTRUCTIONS FOR USE: 10 g each Kg of bird seed, preferably fatty; it is important that the bird seed containing the colouring is kept in a dark place.

USEFUL HINTS: more complete and less toxic with respect to colourings normally used in ornithology, as it has balanced and not excessive quantities of Canthaxanthin, contains micro-encapsulated red vegetable based pigments and Milk thistle (Silimarine).

Vegetable based pigments, with respect to synthetically based pigments, are absorbed better, they are less toxic for the liver, are distributed in a more uniform manner on the plumage and render a brighter colour; micro-encapsulation helps to preserve the effect.

Milk thistle (Silimarine) is well known for its liver protection and regenerative properties. For better colouring, it is important to use fatty egg-food and to not administer vitamin A, which inhibits good colouring absorption.

Powder - 10g Sachet - 100 g can
